IBM Security is pleased to invite you to join us at our interactive roadshow centered around QRadar XDR, the industry's most open threat detection, investigation and response solution that includes our newly acquired AI-driven EDR, ReaQta.

IBM QRadar XDR helps security analysts break down the silos between the proliferation of point products in the industry – providing comprehensive visibility across security tools and data sources, whether in the cloud or on-premises, and equipping security teams with the insights they need to act quickly. "ReaQta adds expanded native **EDR** capabilities to IBM's security portfolio"

The ReaQta solution is unlike *any* other EDR. What *distinguishes* IBM Security ReaQta?

- **Undetectable and tamper-proof** (NanoOS)
- **Continual learning and improvement** (Automated, AI threat detection/hunting and advanced behavioral analytics)
- **Respond to threats within seconds** (Cyber assistant, real time remediation)
- **Tailor made threat hunting** (DeStra – Detection Strategy)

Connected XDR workflows

Hunt + Investigate + Triage + Response + Automate

Open source and standards

EDR   NDR   SIEM   SOAR   Threat intel

IBM Cloud Pak® for Security platform and open integrations

WHAT'S IN IT FOR ME?

Come learn how you can sell our integrated solution that:

- Offers deep endpoint visibility to manage the rise in—and complexity of—malicious and automated cyber activity, most of which originates at the endpoint
- Helps manage threats that are unseen and unknown; protect against zero-day attacks and ransomware
- Anticipates attackers who are "living off the land" (manipulation of legitimate software and files to disguise their presence)
- Protects against the expanding attack surface
